Background

For women around the world, accessing personalized and instant pregnancy care remains a significant challenge.

49%
of U.S. counties lack a single OB/GYN, impacting over 10 million women

NATIONAL INSTITUTE OF HEALTH

800
women die every day from preventable causes related to pregnancy

UNITED NATIONS POPULATION FIND

34% of 590,912
pregnant women had access to personalized prenatal care

AMERICAN COLLEGE OF OBSTETRICIANS AND GYNECOLOGISTS

Design Requirements

- AI Chatbot
- Survey Check-In
- Quick Access Links
- Book Appointments with Healthcare Providers
- Trends Display
- AI-Driven Health Insights
- Privacy & Permissions

Product Vision

Our app is designed to address these gaps by providing expectant mothers with personalized, data-driven insights tailored to their unique pregnancy experiences. By embedding large language models (LLMs) into our platform, we can predict pregnancy patterns based on individual inputs, allowing us to offer proactive care recommendations and early warnings about potential risks.

Research Findings

Expert Consultations

Advocated for pain-rating scales, informing consistent and familiar in-app features for expectant mothers

> "It's not expected that an average mother understands complex medical terms
>
> -LABOR NURSE

User Interviews

Need for tailored guidance and professional support during vulnerable moments. Need for a trusted, clutter-free platform with clear, evidence-based content.

> "I would love a chat feature with professionals at 2am when I'm struggling"
>
> -PREGNANT WOMAN
